10 to 14 residues in length comprising X_2^2 \times_{1-0}^1, X_2^2 \times_{1-1}^1, X_2^2 \times_{1-2}^1, X_1^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2, and X_1^2 \times_{1-2}^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2 \times_{1-2}^2, X_2^2 \times_{1-2}^2 \times_{1-2}^2, X_2^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2, X_1^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2 \times_{1-2}^2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 thrombopoletin. The TMPs are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g. aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(11)c-P1-(L2)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; CTLA4, minetic; IL-1; TMF; antagonist; MMF; inhibitor: erythropoletin; thrombopoletin; interleukin 1; vyctocxic T cell lymphcoyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.

pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently 0 or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                              Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive: EPO; TPO; CTLA4: mimetic; IL-1; TNF: antagonist; MMF; inhibitor; erythropojetin; thrombopojetin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase:

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain; X1 and X2 = are each independently selected from -(Li)c-P1-(L2)d-P2, -(L1)c-P1-(L2)d-P2, -(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and Feige U, Liu C, Cheetham J, Boone TC; Example 1; Page 319; 608pp; English. autoimmune diseases -WPI; 2000-350702/30. (AMGE-) AMGEN INC.

```
useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                   AAA69443
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes composition of matter (I) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1, -(L1)c-P1-(L2)d-P2, (L3)d-P2,                              have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
provided that at least 1 of a and b is 1. The composition can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; WBGF; immunosuppressive; EPO; TPO; CTLA4; minetic; IL-1; TRNF: antagonist; MMP; inhibitor; erythropoietin; thrombopoietin; interleukin 1; vactotoxia Teall lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and autoimmune diseases -

```
be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes composition of matter (I) comprising an (X1)a-rI-(X2)b, where: FI = an FC domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2.

-(L1)c-P1-(L2)d-P2-(L3)e-P^3, or -(L1)c-P1-(L2)d-P2-(L3)e-P3-(L4)f-P4 bhere P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides: L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently linkers; and a, b, c, d, e, and f = are each independently at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombollytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be used for producing pharmaceutical compositions. The compositions are
activities. DNAs, vectors and host cells from the present invention can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autofinmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; minetic; IL-1; TMF; antagonist; MMF; inhibitor; erythropoietin; thrombopoietin; interleukin 1; cytocoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel composition of matter comprising an Fc domain and pharmacologically active peptides, useful for treating cancer and

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-F1-(X2)b, where: F1 = an FC domain, X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P3-(L4)f-P4 = are each independently sequences of where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides, L1, L2, L3, and L4 = are each independently linkers; and a, b, c, d, e, and f = are each independently of that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention can be useful for treating pharmacoutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer
                                                                                                                                                                                                                      ij
useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAA69526 and AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VBGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP; inhibitor; erythropoletin; thrombopoletin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase; asthma; thrombosis; pharmaceutical.

A compound which binds to an mpl receptor comprising a thrombopoietin mimetic peptide (TMP) dimer joined by a linker [TMP_1-(L_1)_ITMP_2], is new. TMP_1 and TMP_2 are amino acid sequences varying from at least 10 to 14 residues in length comprising X_2 - X_1 = 0, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_1 - 1, X_2 - X_2 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X_3 - 1, X
half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA6943 to AAB469526 and AAB16095 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Thrombopoietin; mimetic; TMP; TPO; platelet; megakaryocyte; production; anti-human immunodeficiency virus; anti-HIV; anti-anemic; dermatological; immunosuppressive; anti-inflammatory; linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Thrombopoietic peptides which activate mpl receptors and increase the production of platelets or platelet precursors, useful for treatment of diseases which involve thombocytopenia
                                                                                                                                                                                                                           Gaps

The present invention describes composition of matter (I) comprising an FC domain, pharmacologically active peptides, and linkers. Where (I) is: (X1)a-FI-(X2)b, where: FI = an FC domain; X1 and X2 = are each independently selected from -(L1)c-PI-(L2)d-P2.

-(L1)c-PI-(L2)d-P2-(L3)e-P3, or -(L1)c-PI-(L2)d-P2-(L3)e-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of pharmacologically active peptides; L1, L2, L3, and L4 = are each independently independently linkers; and a, b, c, d, e, and f = are each independently of or 1, provided that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities DNAs, vectors and host cells from the present invention can be useful for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an FC domain (rather than a Fab domain) can provide a longer
                                                                                                                                                                                                                   ;

activate the c-Mpl receptor which mediates the activity of endogenous thrombopoietin. The IMPS are useful for increasing the production of platelets or platelet precursors (e.g. megakaryocytes) in a mammal, which is useful for treatment of diseases which involve thombocytopenia, e.g. aplastic anaemia, immune thrombocytopenia (ITP), human immunodeficiency virus associated ITP, and systemic lupus erythematosus.
                                                                                                                                                                                                                       Gaps

The present invention describes composition of matter (1) comprising an Fc domain, pharmacologically active peptides, and linkers. Where (1) is: (X1)3-F1-(X2)b, where: Fl = an Fc domain; X1 and X2 = are each independently selected from -(L1)c-P1-(L2)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P2-(L3)d-P3-(L4)f-P4 where P1, P2, P3, and P4 = are each independently sequences of harmacologically active peptides; L1, L2, L3, and L4 = are each independently inkers; and a, b, c, d, e, and f = are each independently inkers; and a, b, c, d, e, and f = are each independently that at least 1 of a and b is 1. The composition can have cytostatic, antiasthmatic, thrombolytic and immunosuppressive activities. DNAs, vectors and host cells from the present invention are be used for producing pharmaceutical compositions. The compositions are useful for treating cancer, asthma, thrombosis, or autoimmune diseases. The use of an Fc domain (rather than a Fab domain) can provide a longer half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443
half-life or incorporate functions such as Fc receptor binding, protein A binding, complement fixation, and possibly placental transfer. AAA69443 to AAA69526 and AAB16955 to AAB18003 represent nucleotide and amino acid sequences used in the exemplification of the present invention.
                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Modified peptide; therapeutic agent; fusion; Fc domain; cancer; autoimmune disease; cytostatic; antiasthmatic; thrombolytic; VEGF; immunosuppressive; EPO; TPO; CTLA4; mimetic; IL-1; TNF; antagonist; MMP: inhibitor; erythxropietin; thrombopoietin; interleukin 1; cytotoxic T cell lymphocyte antigen 4; tumour necrosis factor; vascular endothelial growth factor; matrix metalloproteinase;

C; Comment: This enzyme, which catalyzes the oxidation of benzendiol to benzosemiquinone
C; Genetics:
A; Introns: 86/3
C; Superfamily: laccase
C; Keywords: copper; glycoprotein; oxidoreductase
C; Keywords: copper; glycoprotein; oxidoreductase
C; Keywords: copper; glycoprotein; predicted <SIG>
F; 12.7 Domain: signal sequence #status predicted <ARO>
F; 22-49,Domain: propeptide #status predicted <ARO>

S25795
probable deoxyribodipyrimidine photo-lyase (EC 4.1.99.3) - Chlamydomonas reinhardtii
N:Alternate names: DNA photolyase homolog; probable blue light photoreceptor
C:Species: Chlamydomonas reinhardtii
C:Species: Chlamydomonas reinhardtii
C:Accession: S57795; S66368
C:Accession: S57795; S66368
C:Accession: S57795; S66368
C:Accession: S57795; Mulp. B.: Lefebvre P.A.
Plant Mol. Biol. 28, 443-454, 1995
A:Title: Characterization of a Chlamydomonas reinhardtii gene encoding a protein of the Accession: S57795

A; Title: Identification of novel conNas encoding human kexin-like protease, PACE4 isof
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A Molecule type: mRNA
A; Residues: 1-652 <TSU>
C; Comment: This protein consists of a signal peptide, a propeptide, a substilisin-lik
C; Comment: This protein cleaves precursor proteins at dibasic amino acid residues.
                                                                                                                                                                                                                                                                                                                                   subtilisin-like proprotein convertase (EC 3.4.21.-) PACE4 precursor, splice form C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A.Gross references: GDB:131390; OMIM:167405

J. 621 Sci. 107:635-644(1994).
-!- FUNCTION: FORCE GENERATING PROTEIN OF EUKARYOTIC CILIA AND FLAGELIA. PRODUCES FORCE TOWARDS THE MINUS ENDS OF MICROTUBULES.
DYNEIN HAS ATPASE ACTIVITY.
-!- SUBUNIT: CONSISTS OF AT LEAST 3 HEAVY CHAINS (ALPHA, BETA AND GAMMA), 2 INTERMEDIATE CHAINS AND 8 LIGHT CHAINS.
-!- SIMILARITY: BELONGS TO THE DYNEIN HEAVY CHAIN FAMILY.
                                                                                                                          P->S: IN DBTS; SHORTENS THE BEHAVIORAL

DISTRIBUTION IN BOTH NEUROENDOCRINE AND NON-NEUROENDOCRINE TISSUES

TO CONSTITUTIVE SECRETORY PATHER XY(K/K) R CONSENSUS MOTIF.

TO CAPABLE OF CLEAVAGE OF ARG-XAA-ARA-ARG-I-ZAA BONDS,

WHERE XAA CAH NE ANY MANNO ACID AND YAA IS ARG OR LYS.

TO CAPALLY AMANNO ACID AND YAA IS ARG OR LYS.

TO CORACTOR: PACRAA-I PRECURSOR PROTEIN SEEMS TO EXIST IN THE

RETICULUM WINDOPLASMIC AS BOTH A MONOMER AND A DIRER-SIZED COMPLEX

WHERE AND ALTURE PACEAA-I EXISTS ONLY AS A MONOMER, SUGGESTING THAT

TRETICULUM WINDOPLASMIC AS BOTH A MONOMER, SUGGESTING THAT

TRETICULUM RODELASMIC PRECURS ITS TERTIARY OR QUATERNARY STRUCTURE.

C. - SUBCHILLY. PACEAA-I EXISTS ONLY AS A MONOMER, SUGGESTING THAT

C. - SUBCHILLY. PACEAA-I EXISTS ONLY AS A MONOMER,

TRETICULUM RODELASMIC PACEAA-I EXISTS ONLY AS A MONOMER,

C. - SUBCHILLY. PACEABLED AND REMAIN PROBABLY IN ZYMOGEN FORM

IN ENDOPLASMIC RETICULUM. PACEAE-II AND PACEAE-II ARE RETAINED

C. INTRACELLULAR LEVER PROBABLY THROUGH A HYDROPHOBIC CLUSTER IN THEIR C-

TENANTARIC PACABA MICHT RE SECRETED.

ISOFORM PACE4D LACKS THE PROPEPTIDE DOMAIN.
-i- SIMILARITY: BELONGS TO PEPTIDASE FAMILY S8; ALSO KNOWN AS THE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TERMINUS. PACE4B MIGHT BE SECRETED.

ALTERNATIVE PRODUCTS: 8 ISOFORMS; PACE4A-I/PACE4 (SHOWN HERE),
PACE4A-II, PACE4B/PACE4.1, PACE4C, PACE4CS, PACE4D, PACE4E-I AND
PACE4E-II; ARE PRODUCED BY ALTERNATIVE SPLICING. ISOFORMS PACE4B,
C, CS AND D MIGHT BE ENZYMATICALLY INACTIVE.
TISSUE SPECIFICITY: EACH PACE4 ISOFORM EXHIBITS A UNIQUE
RESTRICTED DISTRIBUTION. PACE4A-I IS EXPRESSED IN HEART, BRAIN,
PLACENTA, LUNG, SKELETAL MUSCLE, KIDNEY, PANCREAS, BUT AT
COMPARATIVELY HIGHER LEVELS IN THE LIVER. PACE4A-II IS AT LEAST
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      "Endoprotease PACE4 is Ca2+-dependent and temperature-sensitive and can partly rescue the phenotype of a furin-deficient cell strain."; Biochem. J. 339:639-647(1999).

Shows modest affinity for thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methylhistamine. Isoform 4 is unable to bind to iodoproxyfan while isoforms 1 and 3 bind it with high affinity. SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.

TISSUE SPECIFICITY: EXPRESSED PREDOMINANTY IN THE CINS, WITH THE GREATEST EXPRESSION IN THE THALAMUS AND CAUDATE NUCLEUS. THE VARIOUS ISOFORMS ARE MAINLY CORRERESED IN BRAIN, BUT THEIR RELATIVE EXPRESSION LEVEL VARIES IN A REGION-SPECIFIC MANNER. ISOFORMS 3 AND 7 ARE HIGHLY EXPRESSED IN THE THALAMUS, CAUDATE NUCLEUS AND CEREBELLUM WHILE ISOFORMS 5 AND 6 SHOW A POOR EXPRESSION. ISOFORMS 5 AND 6 SHOW A HIGH EXPRESSION IN THE ANGEDALA, SUBSTAMTIA NIGRA. ISOFORM 7 IS NOT FOUND IN HYPOTHALAMUS, OR SUBSTAMTIA NIGRA.
